

Participatory Narrative Inquiry

An Introduction with Special Attention to Health Care

Cynthia Kurtz
July 2015

Talk outline

1. What is PNI?
2. Why stories?
3. What does PNI look like?
4. Where do the ideas in PNI come from?
5. What is your history with PNI?
6. What can you do with PNI?
7. What can't you do with PNI?
8. PNI in health care (with case studies)
9. Questions

What is PNI?

Participatory narrative inquiry is an approach in which groups of people participate in gathering and working with raw stories of personal experience in order to make sense of complex situations for better decision making.

PNI focuses on the profound consideration of values, beliefs, feelings, and perspectives through the recounting and interpretation of lived experience.

What is PNI?

participatory,
not extractive

Participatory narrative inquiry is an approach in which groups of people **participate** in gathering and working with raw stories of personal experience in order to make sense of complex situations for better decision making. PNI focuses on the profound consideration of values, beliefs, feelings, and perspectives through the recounting and interpretation of lived experience.

What is PNI?

participatory,
not extractive

using stories to
think together,
not just
collecting them

Participatory narrative inquiry is an approach in which groups of people participate in gathering and **working** with raw stories of personal experience in order to make sense of complex situations for better decision making. PNI focuses on the profound consideration of values, beliefs, feelings, and perspectives through the recounting and interpretation of lived experience.

Prove anything conclusively. Why not?

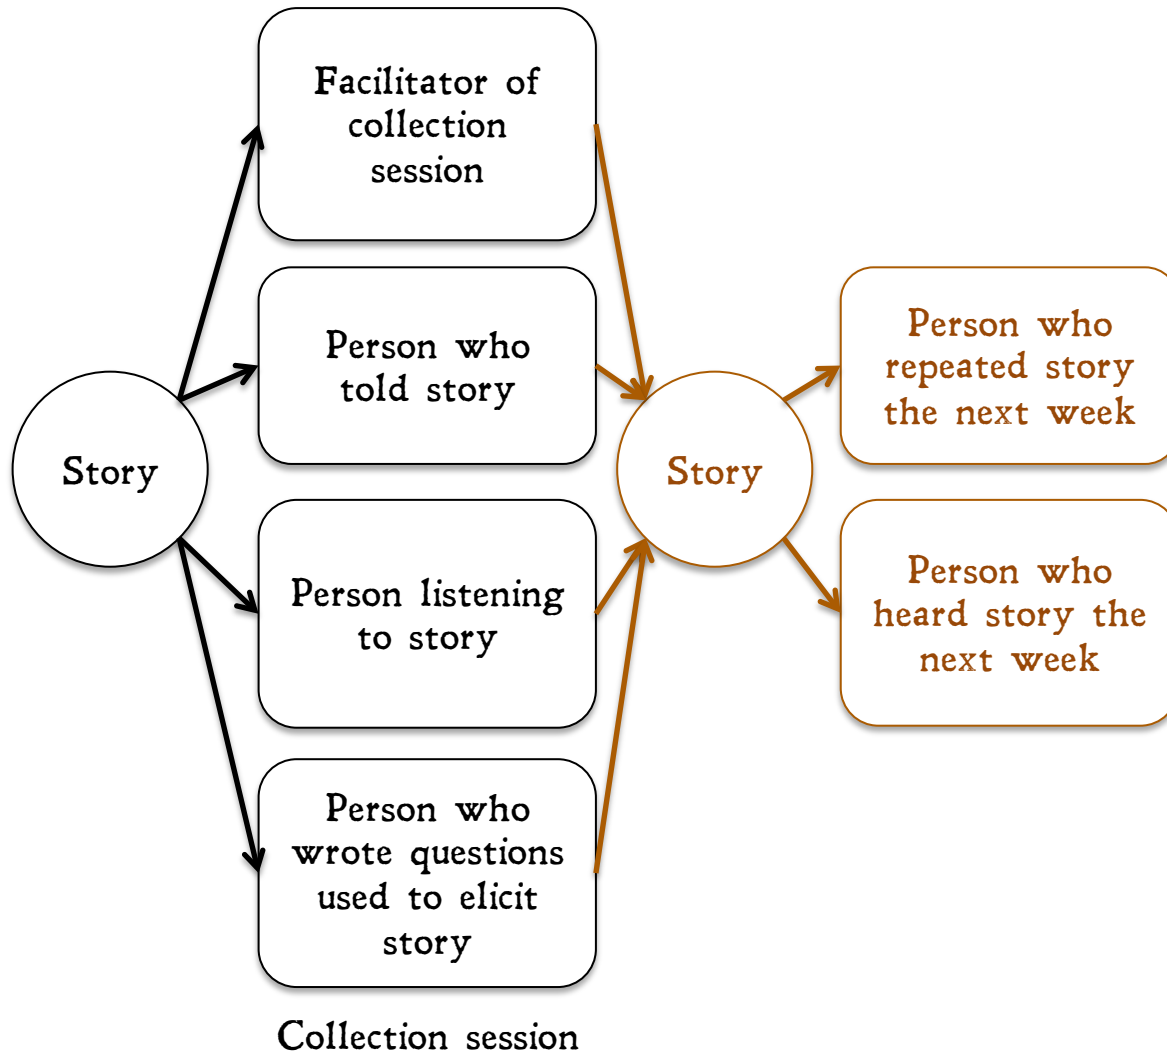

What can't you do with PNI?

Prove anything conclusively. Why not? *So many intermingled interpretations!*

PNI in health care

PNI in health care – case 1

Hospital – retention of nursing and administrative staff

They saw:

- ✓ high turnover

They thought:

- ✓ staff quit because of stress

They found out:

- ✓ Work stress was seen *positively* when it was combined with challenge in an environment of trust and teamwork

PNI in health care – case 2

Pharmaceutical firm – doctor views of representatives

They saw:

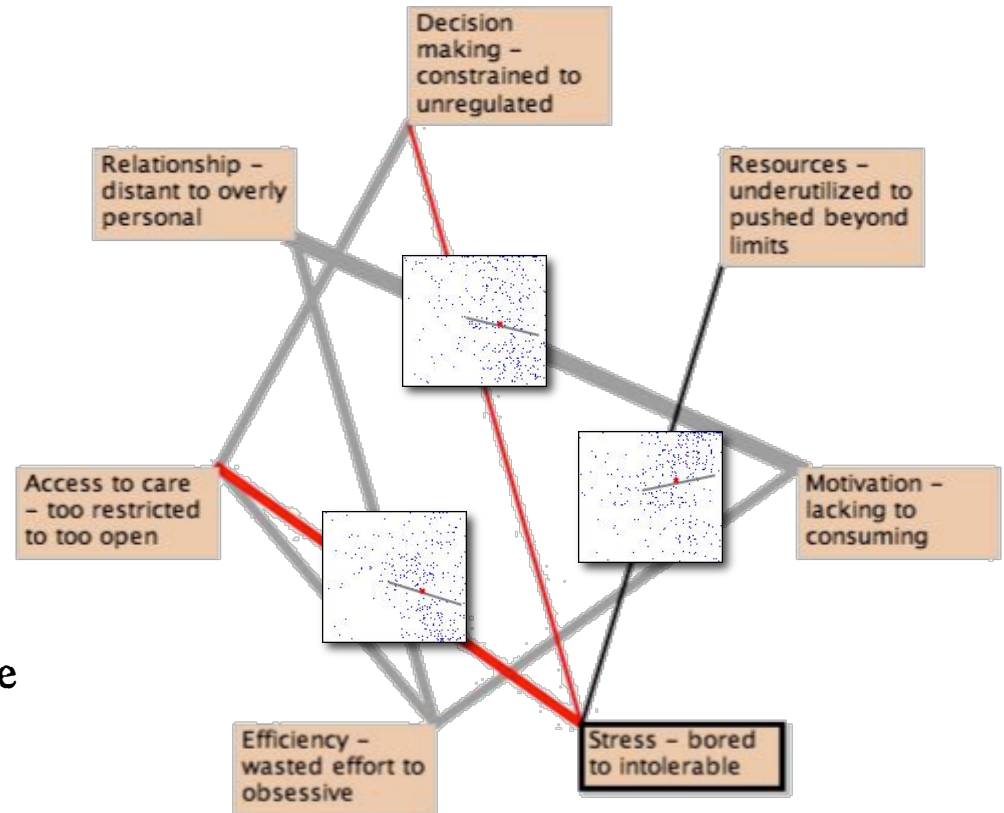

- ✓ doctors irritated with reps

They thought:

- ✓ doctors never want to be bothered by reps

They found out:

- ✓ Visits from reps were welcome (“angels”) when they helped doctors provide better patient care (“Help me help my patients”)

PNI in health care – case 3

Pharmaceutical firm –
relationships between patients
and doctors

They saw:

- patients and doctors butting heads

They thought:

- power dynamics are inherent in the relationship

They found out:

- Patients with different conditions had different feelings about control, need for information, and views of pharma

Control of decision making				
	Asthma	Gastro intestinal	Blood Pressure	Cholesterol
Need help	Yes		Yes	Yes
Understand treatment		Yes		Yes
Know what to do		Yes	No	
Who should be in charge		Me	Conflicted	My doctor
(Doctors) Opinion of patient	Conflicted		Conflicted	
(Doctors) Can patient handle treatment?		No		
Satisfaction				
	Asthma	Gastro intestinal	Blood Pressure	Cholesterol
Treated well			Badly	
Opinion of pharma			Good	
Information received	Okay		Okay	Useless
Fully heard	Fully	Not at all	Fully	Fully
Fully included	Fully	Not at all	Fully	Not at all

PNI in health care – case 4

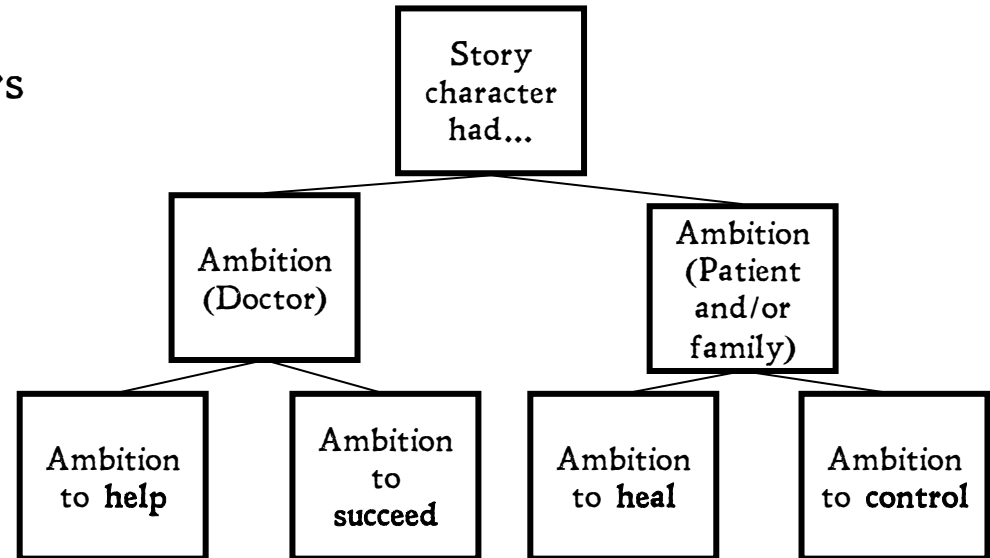

Pharmaceutical firm – why doctors do what they do

They saw:

- ✓ doctors struggling

They thought:

- ✓ all doctors face similar challenges

They found out:

- ✓ Doctors responded in a variety of ways to terms like ambition, fairness, control, selfishness, validation
- ✓ Three distinct motivations: community caretaker, life-saving hero, everyday worker

PNI in health care – case 5

Maker of medical devices – how to design devices for different conditions

They saw:

- ✓ six different conditions

They thought:

- ✓ what do these people need?

They found out:

- ✓ People with each medical condition had varying needs a device should meet (e.g., clarity, reassurance, privacy, reliability).

The most successful anaphylaxis patients depended on others to make decisions.

People with migraines who had the most success in controlling the condition depended *least* on the decisions of others.
